-- Top Alerts represent the most timely and relevant alerts and can be displayed at the  
top of the page. In one embodiment, Top Alerts can appear for 48 hours after firing, after which  
they will be moved to their regular category displayed below the Top Alerts display area. In  
addition to time limits on Top Alerts, an alert can be made to expire according to a predefined  
expiration date after it is moved to its regular category. News Alerts represent information  
appearing in published materials concerning an investment. Research alerts indicate specific  
financial information that is more likely to be understood by sophisticated investors. For  
example, "The price-earnings (P/E) ratio for MSFT has been greater than two times its average  
next year's projected earnings growth rate. For small and mid-cap stocks in particular, this is  
generally considered as a sign that a company may be overvalued." --
